Gladiolus Beautiful

Oh, stately Gladiolus! Oh, flower of sunset hue!
Whence comest all thy radiance? Did'st thee the sun imbue
With loveliness that only is expressed in splendour rare?
Or why hast thou outrivaled e'en the fairest of the fair?

I now can see thine aureate swords
Reflect the golden sun:
Again vermilion turns me towards
A scene where fire elves run.

O'er there's an azure petaled show
Of tall spikes in a line.
And here's one niveous as the snow:
Immaculate, sublime.

The gorgeous blaze of color
Is softened here and there
By delicate and dainty tints—
Describe them? I despair.

A giant towering yonder
Bespeaks Utopia's king;
Methinks I'll stop and ponder
While birds their anthems sing.

Why hath this wondrous beauty
Been given us by God?
These flowers of every color
Grown from uncomely sod?

Oh, stately Gladiolus! Oh, flower of sunset hue!
Thou art the garden's fairest, the King of Flowers, too.

—Grant E. Mitsch.

FOREWORD

In presenting this 1931 issue of SUPERIOR GLADS, I wish first of all to thank my customers for their past patronage and for their letters of appreciation. Those who have never grown my bulbs are invited to give them a trial and be "convinced" of the merit of these Oregon grown bulbs. I desire that "Every Bulb a Gem" be a fact as well as a slogan, and any who, for any reason, are dissatisfied with bulbs bought here are urged to write me that proper adjustment may be made. I want satisfied customers.

The popularity of the *Gladiolus* has increased until today it well merits its title of King of Summer Flowers. The diversity of form, beauty of coloring, and long lasting qualities as a cut flower make it a favorite everywhere. In form there are wide-open flowers on one hand and gracefully hooded ones on the other, with, in many instances, ruffled, lacinated, pointed, or curled petals. In color Glads range from very dark red (almost black) to exquisitely dainty pastel shades and even snow white. Nearly all colors are represented, including white, yellow, violet, red, and pink with intermediate shades. While true blue remains a goal towards which hybridists must work with a view of future attainment, yet definite approaches are being made towards this color which has intrigued the breeders of other varieties of flowers as well as Glad hybridizers. The ethereal delicacy of the *primulinus* hybrids lends them to use in vases and small baskets, while, where more of a show is desired, the *grandiflorus* varieties excel. In size, Glads range from very small flowers to some of the most recent varieties which frequently measure seven to eight inches across under high culture.

To add a touch of real blue to your gardens, you can do no better than to plant a few *Delphiniums*, the finest and most beautiful blue perennial. A few *Lilies* and *Dahlias* are also being offered to those interested in these aristocrats of the flower garden.

INSTRUCTIONS FOR ORDERING

Prices: Cash or 25% down; balance before delivery or C. O. D. 5 bulbs may be purchased at the 10 rate and 25 at the 100 rate. Prices prepaid in United States and Canada on orders over \$1.00. For less amounts please add 15c for postage and packing. Prices prepaid to other parts of the world except on large and medium bulbs where price is less than 15c each on large bulbs. Delivery made along Pacific Coast any time after bulbs are ready. Eastern orders shipped after March 1st. Prices are quoted on three sizes of bulbs, the Large size being Nos. 1 and 2; Medium, Nos. 3 and 4; Small, Nos. 5 and 6. Note in comparing prices that my prices are usually about the same for large bulbs as most growers ask for No. 2. The same comparison applies to other sizes. I use a large percent of the larger size in filling orders and always endeavor to give good value.

Discounts: On orders for over \$5.00, you may select extra bulbs free to the extent of 10% of the value of the order. On \$10.00 to \$25.00 orders, 15% extra in bulbs. On \$25.00 to \$50.00 orders, 20% extra in bulbs. On orders over \$50.00, 25% extra in bulbs.

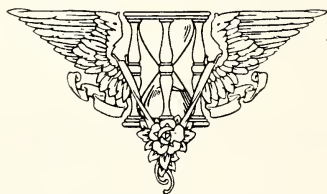

I endeavor to send out only bulbs that are true to name and healthy and if any should prove otherwise, I ask that you write me that I may replace them.

For those unfamiliar with the names of Glads, I will make up selections for any amount they care to invest. If special colors are desired, it would be well to mention them and I will endeavor to comply with their desires.

Visitors welcome at my gardens during blooming season. Please do not come on Sundays for business purposes.

"Every Bulb a Gem"

For the benefit of those who have not grown Glads before, it might be well to include a few words as to their culture. Glads do well on nearly any soil but they appreciate good ground the same as most other plants. For largest blooms, plant large bulbs about six inches apart in rows eighteen inches or two feet apart. Smaller bulbs may be planted closer. They may be planted from three to six inches deep, according to soil and size of bulb. In sandy soil they should be planted deeper than in heavy soil. Avoid planting near trees or too close to building foundations. If fertilizer is used, do not let it come in contact with the bulbs. Glads repay frequent thorough watering during dry weather. Bulbs may be dug when tops begin to die or when frost kills tops and after drying three or four weeks, the roots and old bulb should be removed. Store bulbs in dry, frost-proof place for winter.

LONGFELLOW (Prestgard) 1		.08	.05	Pkt.	.20
A beautiful clear pink wide	10	.60	.40	.25	1000	1.00
open flower, perfectly placed	100	1.25
on fine straight spikes.						
LORRAINE BUDGE (Kinyon) 1		3.00	10	2.50
Another fine clear light pink with white throat. Tall spikes with good sized florets.						
LOS ANGELES (Houdyshel) 10		.50	Pkt.	.10
The famous cut-and-come- again glad. Pretty pink with red feather in throat.						
LOUIS HEMON (Lemoine)	1	.20	.15	.10	Pkt.	.15
One of the greatest color	10	1.75	1.25	.80	100	.35
novelties ever brought out.	100	15.00	8.00	4.00	1000	3.00
This attracts more attention	1000	70.00	35.00	Qt.	12.00
in my planting than any- thing else I grow. Three inner petals yellow. Outer petals yellow at base and tips salmon to red, some- times flaked. I have perhaps the largest stock in the United States.						
LOYALTY (Austin)	1	.60	.40	.20	10	.75
Large, tall, strong-growing deep yellow. Somewhat like the old Golden Measure in growth but much deeper in color.

tion glads and quite the equal						
of Mother Machree as a						
smoky.						
MAROCCO (Pfitzer)	1	1.25	.80	.50	1	.10
Fine black red, flaked dark-	10	.90
er. This is not a dull colored						
flower but a glowing one.						
Good sized. Extra.						
MAROLEE (Carpenter)	1	3.00	2.00	1.00	1	.25
Marolee is one of the largest	10	18.00	10	2.00
and most striking glads I	100	18.00
grow. Flowers wide-open						
and flat somewhat like						
Pfitzer's Triumph but bigger.						
Rich rose pink, somewhat						
flaked; inner petals blotched						
yellow. Early.						
MARY FREY (Gelser)	1	.20	.15	.08	Pkt.	.15
An early lavender with red	10	1.75	1.25	.65	100	.45
blotch. Good sized flowers	100	8.00	4.00	1000	3.50
on slender stems.

Seeds and Seedlings

This year for the first time, I am offering Seeds and Seedling bulbs to my customers. I am not listing hand pollenized seed but am offering a few bulbs grown from crossed seed during 1930; also, bulbs of seedlings from named varieties which were not hand pollenized. While I have not covered the blossoms that I cross-pollenize, my observations are that if the pollenizing is properly done at the right time, there is comparatively little danger of pollen from other flowers affecting the cross. However, I am planning on covering at least a part of the crossed blossoms another season for the sake of greater accuracy and those who desire seed of any special cross which may occur to them are invited to send me their suggestions and I may be able to supply them with seed next year. If I should make the desired crosses, there will be no obligation to buy the seed.

Growing Glads from seed has become popular as new varieties are produced in this way. Those from crossed hand-pollenized seed give much better seedlings on the average than those saved indiscriminately, even from the better varieties. In buying seed and unbloomed seedlings from me, you get the complete right to name and introduce any meritorious Glads which might be obtained. As stated above, the seedlings from hand-pollenized seed will give better results on the average; but, of course, these are, in most cases, more expensive than the others. I will first list seed from named varieties followed by a list of seedling bulbs.

IN GARDENS

We simple folk, who work in gardens, see
 Each day some proof of immortality.

From fern leaves, withering into richer mold,
 We see fresh fronds unfold.
 From tiny seeds, all wrinkled, brown and sere,
 Great plumes of flowers appear.

A plant lies dormant till we deem it dead,
 Then, thrilled by Spring, again it lifts its head,
 Pushes aside the earth to give it room,
 With life triumphant, bursts once more to bloom.

Fresh willow branches shine with silver sheen,
 One, severed, still sends forth its shoots of green,
 Till, life exhausted, mingles its dust with sod.
 'Neath sister trees, and mounts again to life and God.

We simple folk, who work in gardens, see
 Each day fresh proof of immortality.

GLADIOLUS SOCIETIES

All Glad fans should be members of the American Gladiolus Society. This organization issues a monthly magazine, "The Gladiolus Review," which is worth more than the \$2.00 membership fee. The timely articles are always of interest to the amateur and professional alike. Dues to the Oregon Society are \$1.50 per year, or \$2.50 per year with affiliated membership in the national organization, including subscription to the monthly review.

The British Gladiolus Society publishes an annual which is of distinct value to all Glad enthusiasts. This is given free to all members. Amateur membership at \$1.30 per year and professional at \$2.60.

To anyone who sends me dues for membership in any of these organizations, I offer free your choice of a large bulb of Fanny Crosby, or a medium bulb of Mother Machree, or three bulblets of Commander Koehl. Any who are already members may secure the free bulbs by getting a new member and sending dues to me.

64-Acre Farm for Sale

64-acre Calapooia River bottom farm for sale. One of the finest in the valley. Farm located 2 miles east of Brownsville, Oregon, on the main macadamized road from Halsey (on the Pacific Highway) to Cascadia, a summer and health resort. Cascadia is less than an hour's drive from our place over beautiful scenic road.

We are told by some of the old settlers here that we have some of the best soil on our place of any in the country, and they advise us we are unwise for trying to sell this place. We can grow almost any crop on our soil that grows in the temperate zone in general. Our wheat last year produced 42 bushels to the acre on old orchard land without fertilizer or irrigation, and some of it was not very thick on the ground and part of it was on some of the poorest land we have in cultivation. We have grown the finest raspberries, strawberries, gooseberries, blackberries and some of the finest apples, sweet potatoes, etc., on our place we have ever seen. We grow lots of fine vegetables of almost all kinds. We can have fresh beets, carrots and cabbage out of the garden a good share of the winter. Some years the roses are in bloom till Christmas or later. A gladiolus grower from Washington, D. C., touring all over this western country and visiting many leading growers, said we grew about the finest bulbs of any he had seen anywhere. Have grown about as fine alfalfa here as any I ever saw. Have also grown fine corn here.

One can do almost any kind of farming here he wishes. He can diversify on different lines, or specialize in fruit,

poultry, grain, dairy or vegetables, etc. Much of the land farther from the streams is not adapted to so wide a variety of crops as some of the bottom lands. Also our farming land is practically all well drained, and can be worked much earlier in the spring than the flat lands that have poor, or no drainage. Our land is mostly black loam. Part of it sandy loam.

We have about 40 acres in cultivation. Balance is in timber and pasture. Plenty of timber for firewood. Have about 5 acres of alfalfa, about 3 years old, from which we got 3 cuttings, or about 15 tons of hay, and have been pasturing it for several weeks after the third cutting. We have about 2 acres in strawberries. Many are realizing from \$100.00 to \$500.00 per acre and some more than that from strawberries. Have about one-half acre in raspberries, mostly blackcaps. Have 1 acre of the new Youngberries which are much in demand now. They should bear a full crop next summer. We have about 100 sweet cherry trees, (mostly Royal Anns) and lots of other fruits for family use. Also several English walnut and filbert trees. Have a great many varieties of strawberries, raspberries, grapes, etc., that we are trying out in a small way and have some promising new sorts.

We have about $2\frac{1}{4}$ acres under Skinner overhead irrigation. Last year we had about 2-3 acre of Mastodon Everbearing strawberries under irrigation from which we sold \$325.00 worth of berries and more than that amount in plants. We had the plants set 3 feet apart both ways but could have had them half that distance in the rows and doubled the amount of fruit and plants. From about 1-3 acre of blackcap raspberries we sold about \$125.00 worth. Of course these were under irrigation. The irrigation lines cover our garden plot near the house, also the yard in front of the house and on the side where driveway is.

Milk trucks go by our place daily for those who wish to sell whole milk. There are three places in Brownsville where they buy cream, 5 grocery stores, 3 of which handle a line of drygoods, etc., 2 hardwares, bank, meat market, 2 drug stores, 3 service stations for cars, etc., restaurants, confectionaries, etc. Brownsville has a weekly newspaper, high school and

grade school. We are in the Brownsville district and just 2 miles from the southside school. Brownsville has seven churches, Methodist, Presbyterian, Christian, Baptist, Bible Standard, Free Methodist and Adventist. One of the pioneer industrial plants of the Willamette valley, the Brownsville Woolen Mills, is located in Brownsville. It was established in 1860 and is still in operation, and gives employment to quite a number as well as making a market for wool. Brownsville is a town of about 800 to 1000 population and is located about 100 miles south of Portland, Oregon.

Have good improvements on the farm here. Large, modern 8 room house, besides sleeping porch, bath room, closets, pantry, toilet, wash room, and wood shed attached. House plastered. Hot and cold water up stairs and down stairs, electric lights, etc. See photo of house on circular. Have large barn with mow for about 30 tons of hay. House and barn painted and in good repair. There is also a tenant house which we are using at present for bulb storage. Also have large shed, poultry house, etc.

We came out here from Kansas about 5 years ago and after having lived in this country for a while have no desire to ever go back to Kansas to live. A friend of ours from Kansas who has lived in the west for quite a number of years and has a position in the Post Office at Walla Walla, Wash., was to see us a short time ago and said he would rather be in jail in Walla Walla, than to be postmaster in any town in Kansas if he had to live there. We bought here before we sold our place back in Kansas and did not realize nearly what we had expected to get out of our Kansas farm, so it left us with a large indebtedness here, and having an apple orchard on the place here that had been neglected and got diseased, put us to considerable expense to get the trees out and not getting any revenue off the land while we were clearing it, put us back some more, financially. We also cleared a number of acres of new soil since we were here and the place is now in condition for some one to make good on it who has the capital. That is one reason we wish to sell and get out of debt. Another reason is, we wish to get our family of children in a locality where there is a good spiritual church of our choice.

Parties who have not lived here may wish to know something of the climate. We have about 40 inches of rainfall annually. Most of this comes during the winter, thus giving the farmers an opportunity to harvest their hay and grain with very little damage from rain. We have no hot winds, in fact very little wind at all and does not burn up the crops like in the middle west. The nights are cool in the summer, and very few nights but what we need one or more heavy covers. Very seldom have any lightning or thunder storms.

Have fine fishing in many of the mountain streams. Also hunting is a favorite sport with some. There are times during the year when we have open season for deer, China Pheasant, etc. Have about as fine natural scenery in this country as anywhere.

We have a mortgage of \$2500.00 on the place at 6% interest which buyer can assume. We would prefer to sell for cash for the balance as we owe a great deal more than this on our personal note, but could give some terms, if necessary, for part of the balance. Also wish to sell equipped with registered Jersey cattle, horse, farming machinery consisting of tractor, plows, disc, harrows, mower and rake. If you are not interested we will consider it a favor if you would hand this circular to some one who might be interested. If there is any other information you desire, write and we will answer to the best of our ability. We have just reduced our price \$1000 and are now asking \$19,000 for farm with above described equipment.

When You Know a Fellow

When you get to know a fellow, know his joys and know his
cares,

When you've come to understand him and the burdens that
he bears,

When you've learned the fight he's making and the troubles
in his way,

Then you find that he is different than you thought him
yesterday.

You find his faults are trivial and there's not so much to blame
In the fellow that you jeered at when you only knew his name.

You are quick to see the blemish in the distant neighbor's
style,

You can point to all his errors and may sneer at him the
while,

Your prejudices fatten and your hates more violent grow
As you talk about the failures of the man you do not know,
But when drawn a little closer and your hands and shoulders
touch,

You find the traits you hated really don't amount to much.

When you get to know a fellow, know his every mood and
whim,

You begin to find the texture of the splendid side of him;
You begin to understand him and you cease to scoff and sneer,
For with understanding always prejudices disappear.

You begin to find his virtues and his faults you cease to tell,
For you seldom hate a fellow when you know him very well.

When next you start in sneering and your phrases turn to
blame,

Know more of him you censure than his business and his
name;

For it's likely that acquaintance would your prejudice dispel
And you'd really come to like him if you knew him very well.
When you get to know a fellow and you understand his ways,
Then his faults won't really matter, for you'll find a lot to
praise.
